REWATCHING:
INSTANCED
1000

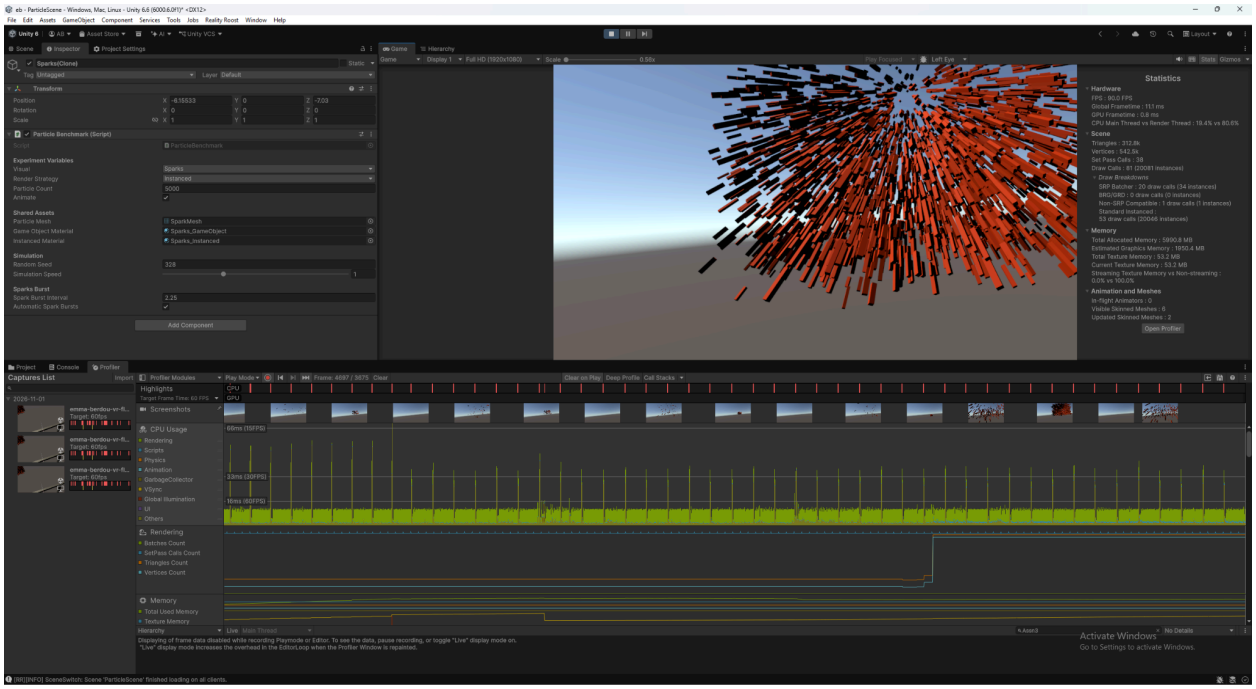

(1)
100

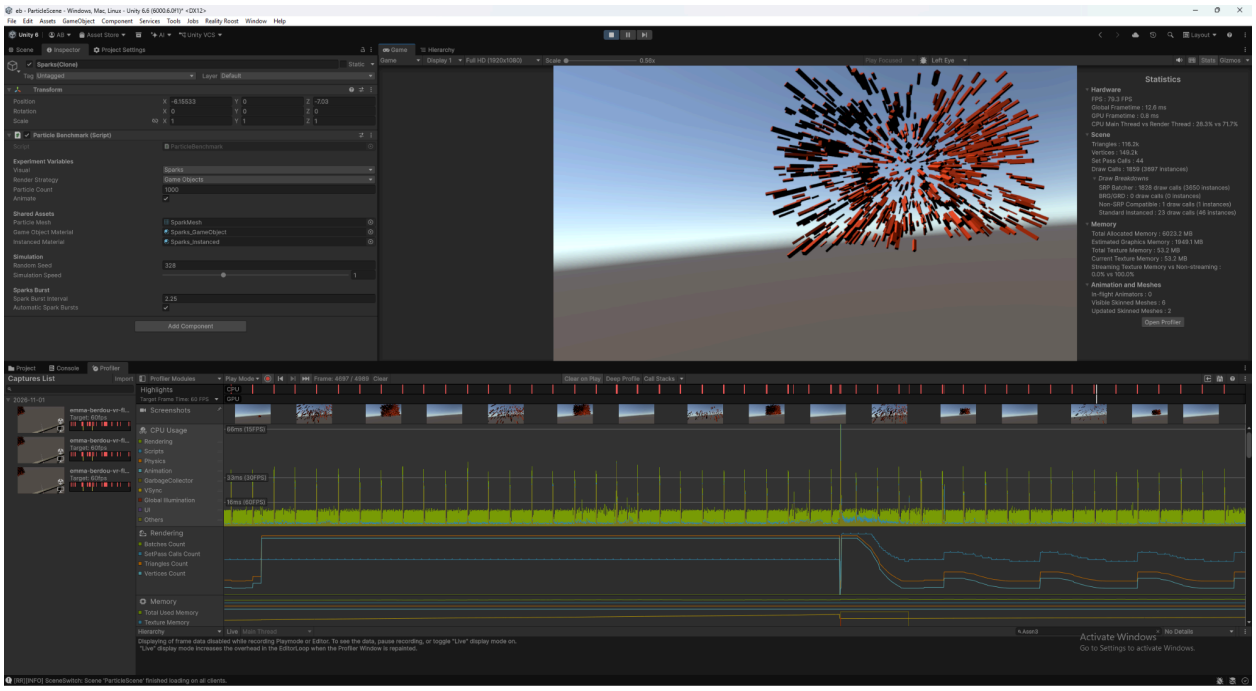

(2)

5000

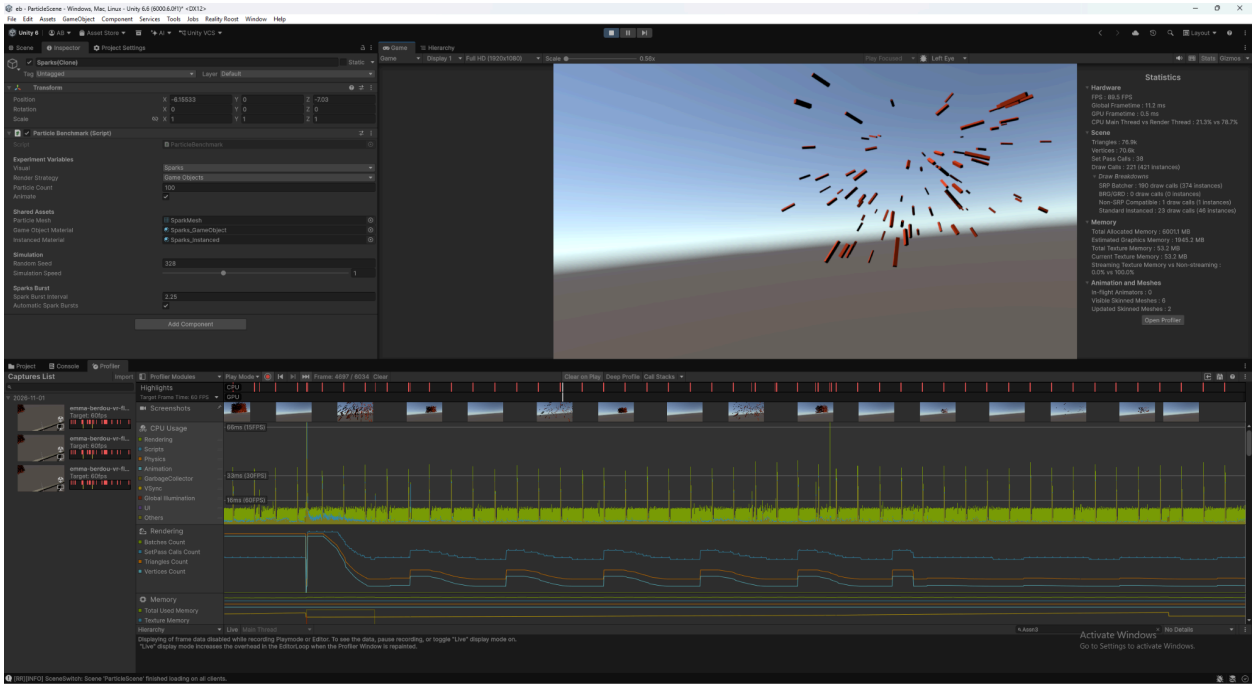

(3) Instanced, 5,000 particles: about 20,000 mesh instances drawn in only 81 draw calls (Standard Instanced: 53 calls for 20,046 instances). Frame time 11.1 ms (90 FPS).

GAME OBJECTS:
1000

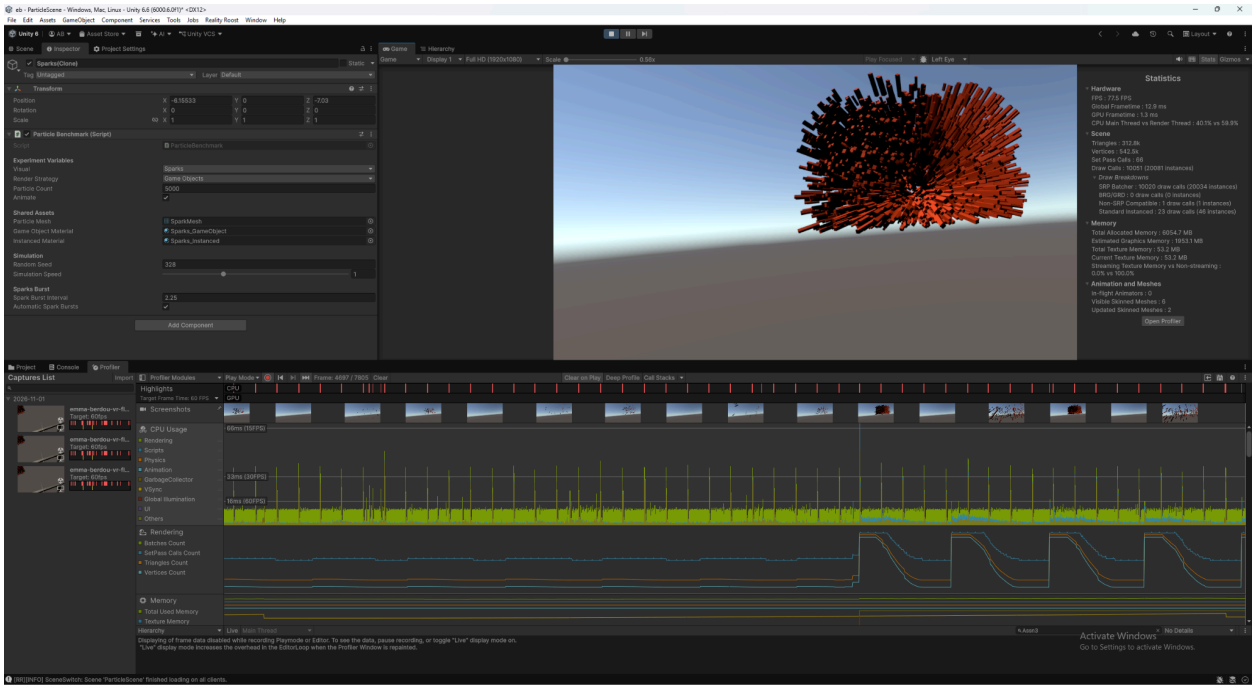

(4)
100

(5)

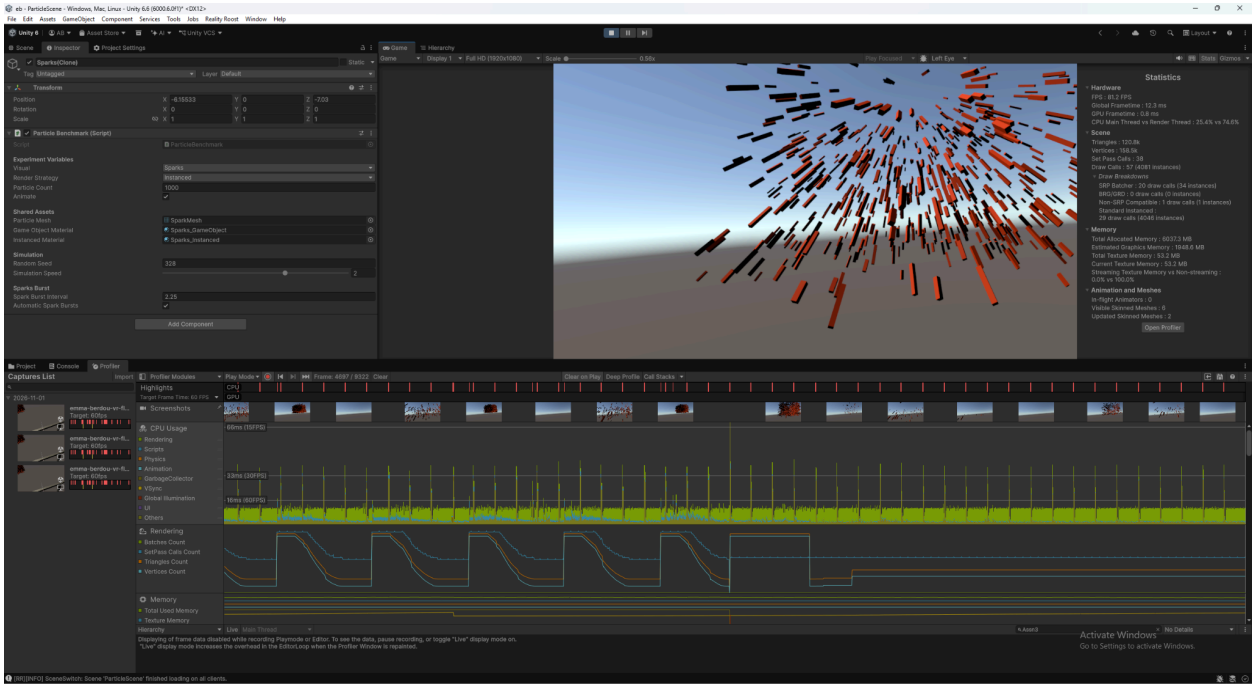

5000

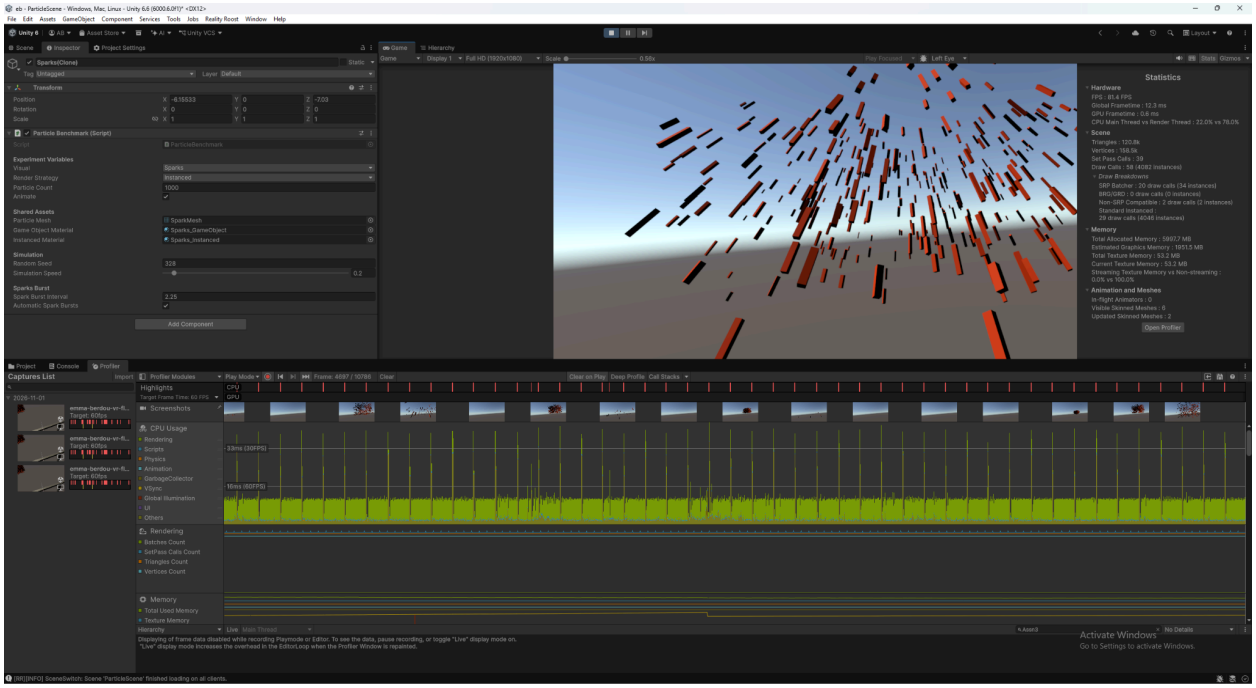

(6) GameObject, 5,000 particles: the same ~20,000 instances need 10,051 draw calls (10,020 through the SRP Batcher). The main thread share rises to 40.1%, but frame time is still 12.9 ms because of the 90 FPS headset sync.

BACK TO INSTANCED
SIMULATION SPEED

2X

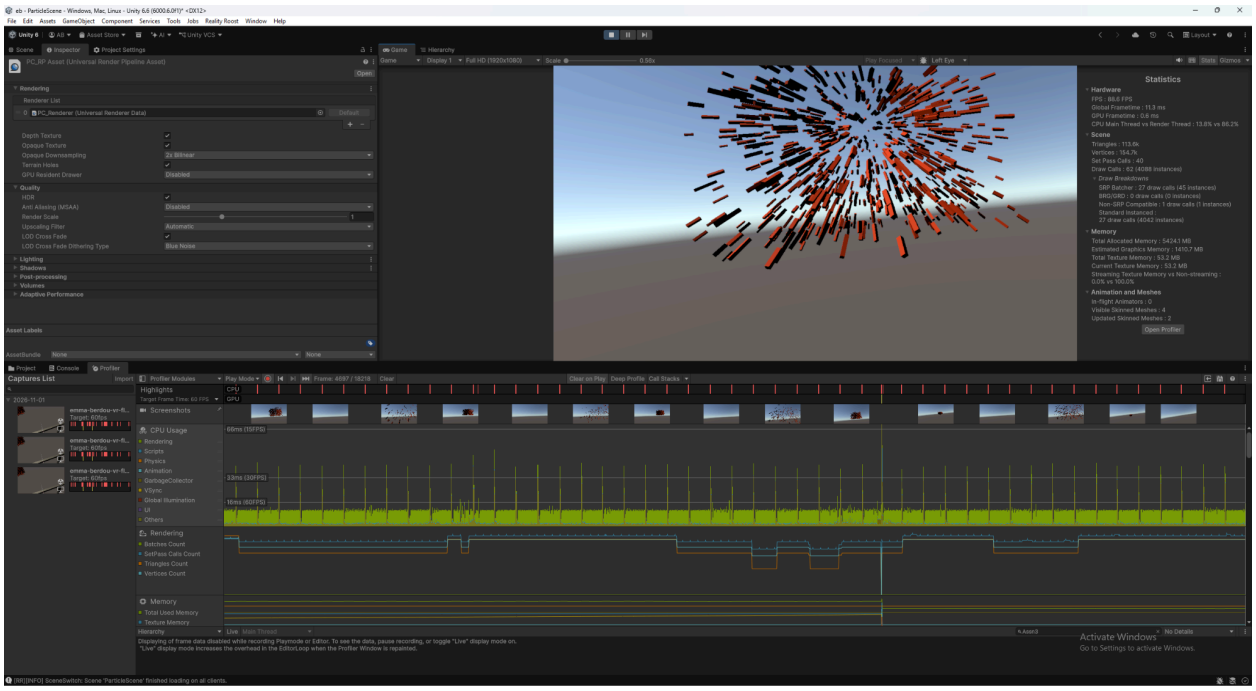

(7)
0.2X

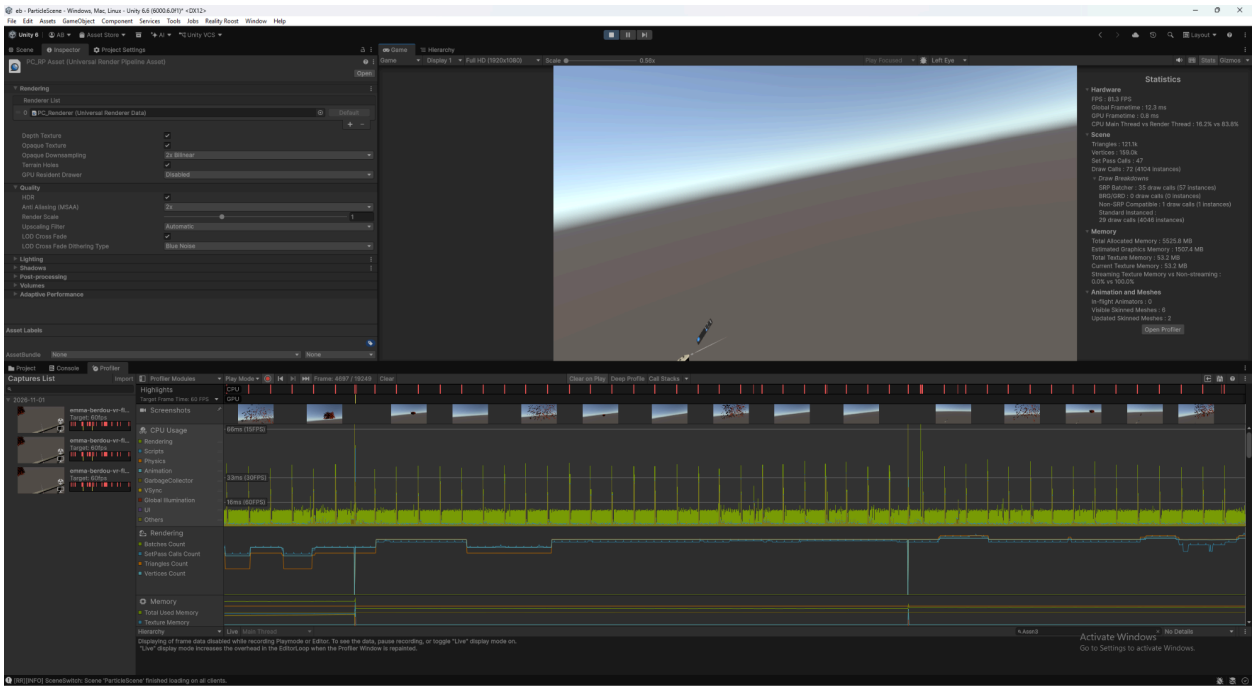

(8)0.2x speed, instanced, 1,000 particles: 12.3 ms frame time, the same as 2x, because the per-frame work doesn't depend on speed. This is my chosen configuration.

ANTIALIASING:
0X

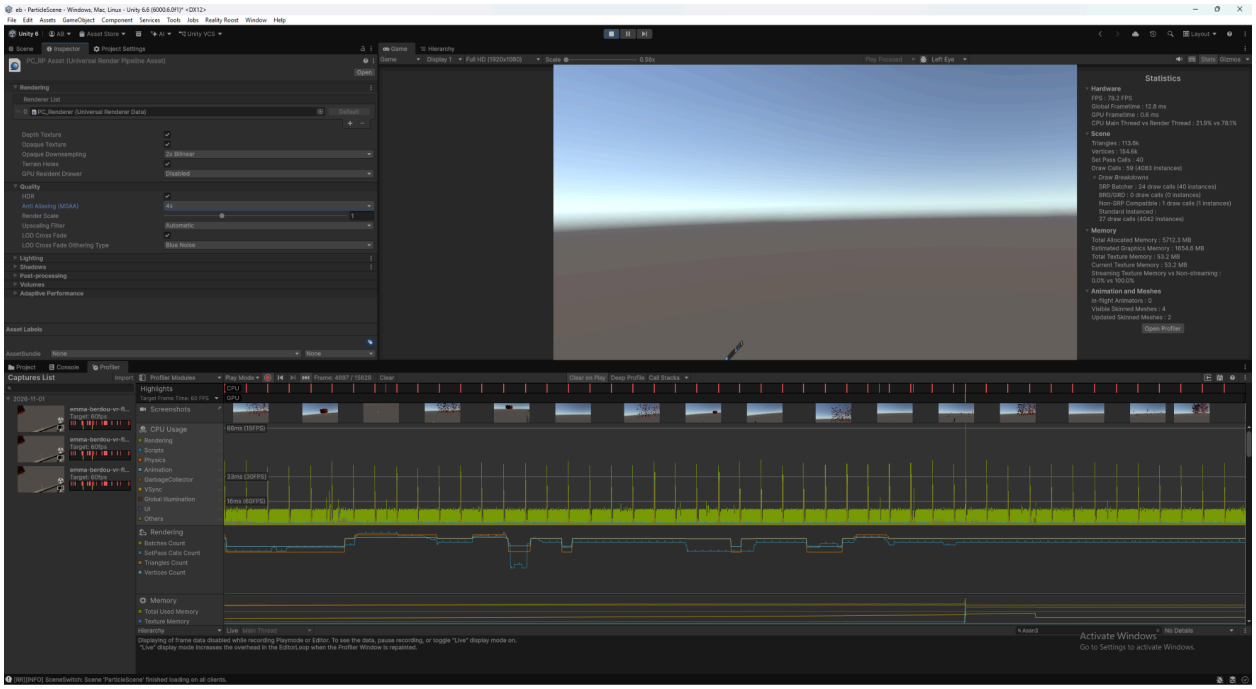

(9) MSAA disabled on the PC_RP asset (instanced, 1,000 particles, speed 1). GPU time 0.6 ms. Compare with (1), which used the same setup at 8x: also 0.6 ms GPU, with smoother spark edges.

2X

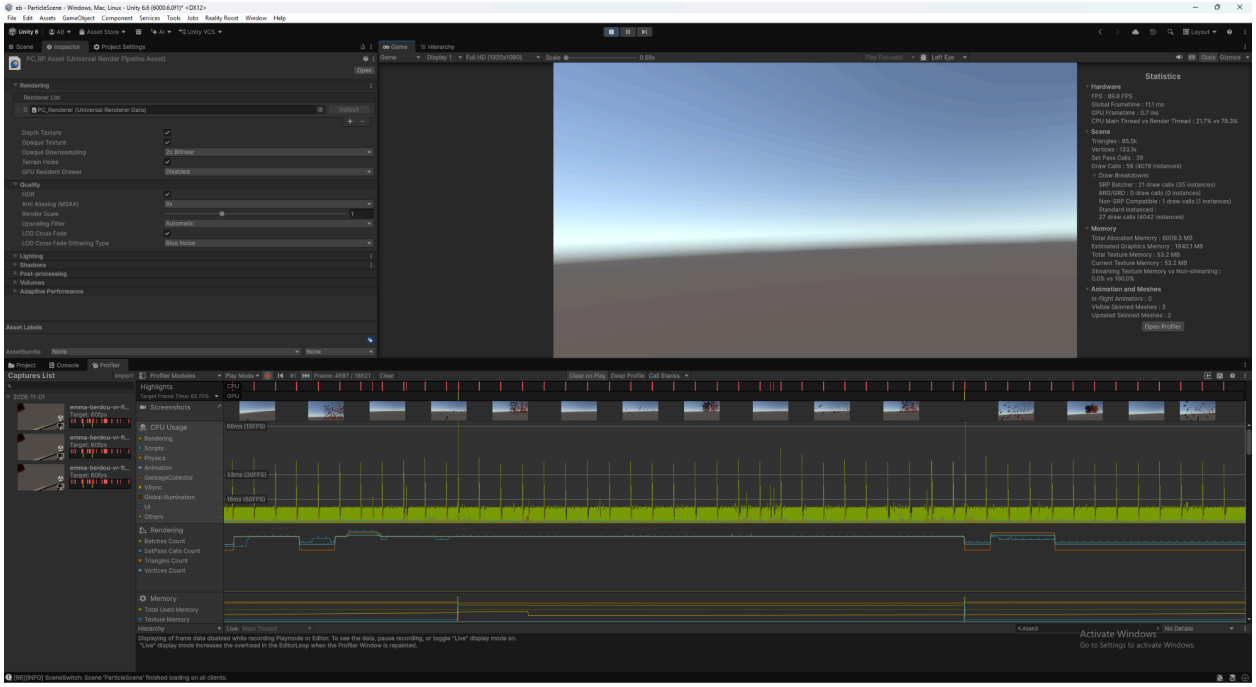

(10)

4X

(11)

8X (DID THE WHOLE THING IN 8X, GONNA START FROM HERE)

(12)
